

## In this issue:

- Transoft launches breakthrough technology for COBOL code with Transoft CIO
- Transoft wins deal to migrate VMS applications for Springfields Fuels
- New graphical interfaces for HP e3000 MPE/iX
- IMPAQ transforms key applications with Transoft solutions

## TRANSOFT MODERNIZATION NEWS

Welcome to the latest edition of our e-newsletter. If you have any questions or feedback please do not hesitate to contact us.

### [Transoft launches breakthrough technology that creates a bridge between COBOL code and new relational databases](#)

Transoft has just launched Transoft CIO, which provides a bridge between existing COBOL code and new relational databases such as Oracle or Microsoft SQL Server. The appeal of Transoft CIO lies in the fact that organizations can maximize the potential of their existing applications without having to undertake major re-development projects with all the associated costs.

### [Transoft wins deal to migrate nuclear fuels production control from VAX OpenVMS to Windows](#)

Springfield Fuels Ltd (formerly British Nuclear Fuels Ltd) which has provided products and services to over 140 reactors in more than 12 countries, has awarded to Transoft a £530,000 contract to migrate the Control Systems Application Software for its Oxide Fuels Complex.

The applications currently run under OpenVMS on HP (DEC) VAX server hardware, but the plant is being modernized and the replacement of the hardware is part of this refurbishment. Transoft competed in an open EU procurement process to win this prestigious contract. It will migrate these applications using its Legacy Liberator toolset to a Windows 2003 server environment.

*"We chose Transoft for this complex and demanding migration as it had both the technical expertise to convert our OpenVMS applications to Windows, and also its well established migration methodology."*

Martin Heaton, Control Systems Development Manager, Springfields Fuels [→](#)

### [Transoft provides graphical interfaces for HP e3000 MPE/iX](#)

Transoft now offers various graphical interfaces to VPLUS screens on HP e3000 systems via its Transoft Graphical Adapter (TGA). Until recently TGA offered an emulation of the VPLUS intrinsics on Windows, Linux and UNIX. TGA has extended the standard VPLUS functionality to allow for a browser-based user interface (ASP.NET or JSP) or a VB.NET user interface, as well as the standard character terminal user interface.

These graphical interfaces are now available directly on the HP e3000. [→](#)

## IMPAQ transforms key applications with Transoft solutions

*"Transoft's flexible innovative modernization approach allowed us to transform our WebExport portfolio management system from a character-based application running on Linux to an application running on Windows using an SQL server database with a modern Web user interface. This approach has proved to be fast, reliable and cost-effective enough for us to leap-frog our competitors!"*

Brian Clarke, Product Manager, IMPAQ →→

Look out for a newly redesigned Transoft web site coming very soon!

## Just one of our happy customers...

*"We're very pleased with the investment we've made in Transoft technology. None of the alternatives we evaluated could have enabled us to meet all of our objectives. We're comfortable that we'll easily recover our investment in 12 months or less. Even with the outstanding Transoft technology, we wouldn't be where we are today without their outstanding sales, support and development teams. Without their combined efforts, we would not have been able to achieve all of our objectives within a reasonable period of time. We're looking forward to a long and profitable relationship!"*
